WELCOME TO COLLEGE STATION, TEXAS - HOME OF TEXAS A&M UNIVERSITY

On behalf of the Central States Section of the Combustion Institute, we welcome you to Texas A&M University for the 13th U.S. National Combustion Meeting. It has been a 4-year journey since our last face-to-face National Meeting. Over the past year, the host committee at Texas A&M and many others on and off campus have been working on preparations for the conference. The Program Chairs, Dr. Steve Son, Purdue University and Dr. Kalyan Srinivasan, University of Alabama, have been working tirelessly along with the Combustion Institute on a high-quality technical program that displays the breadth and depth of the important work that is currently being done in the United States (and internationally) in the combustion field. We are certain that you will find the content both enjoyable and enlightening. Over the next few days, we hope that you will find some time to also explore the Texas A&M campus as well as the surrounding communities of College Station and Bryan. If there is anything we can do to make your visit here as fruitful, educational, and uneventful as possible, please do not hesitate to reach out to any of the host committee members, the Turbomachinery Laboratory staff, or the many A&M graduate students who will be more than happy to assist.

Sincerely,

Host Committee:

Eric Petersen, Waruna Kulatilaka, Tim Jacobs, and Debbie Maggs

13th U.S. National Combustion Meeting

ABOUT THE COMBUSTION INSTITUTE

The Combustion Institute is an international, non-profit, educational and scientific society. Founded in 1954, CI promotes and disseminates research activities in all areas of combustion science and technology for the advancement of many diverse communities around the world. The International Symposium on Combustion is its world congress and major biennial meeting.

The Combustion Institute directs the publication of two scientific journals, Combustion and Flame, published monthly and the Proceedings of The Combustion Institute, published biennially. Those publications and the affiliated journals, Progress in Energy and Combustion Science, Combustion Science and Technology, and Combustion Theory and Modeling link to all aspects of energy and combustion science both inside and outside the direct international combustion community.

The Combustion Institute also fosters a wide breadth of scientific activities, including regional scientific conferences, summer schools, lecture series, and stipend programs for early researchers. CI also maintains good relations with other scientific societies. Our international community is dedicated to combustion research as a field of eminent societal importance that cuts across many scientific and engineering disciplines.
